

# SYSTEMA Brand-New MOTOR

# Magnum & Turbo

## POWER TYPE MOTOR

## SPEED TYPE MOTOR

Our best seller in our **SYSTEMA** Motor Series has been completely revamped. By looking at our conventional 4 variations of motors, we narrowed down our research to Power and Speed types; thus able to develop motors with even greater power and efficiency. One cannot believe the improvement in performance by simply looking at the size of the motor.

It was unimaginable in conventional motors; however this motor can achieve both high power and high speed due to the heart of this ultra-torque motor utilizing a Neodymium Magnet which boasts in excess of 3000 Gauss. Able to perform over 20 revolutions per second on an M170 spring (using a 12V/2400mAh battery with an all Helical Super Torque Up Gear Set).

## Coming Soon!!

In our relentless pursuit for a perfect rotor balance to ensure smooth high speed rotation our new motors employ a Custom Hand Wound rotor.

Our technicians show their expertise through the beautifully hand wound coils. Through the use of this rotor, super high speed rotation of 30,000rpm is achieved.

We were able to cultivate this motor technology through the hard work and dedicated research of our P.T.W. motor.

### Power Type **"MAGNUM MOTOR"**

Long Shaft	MM-L
Medium Shaft	MM-M
Short Shaft	MM-S

### Speed Type **"TURBO MOTOR"**

Long Shaft	TM-L
Medium Shaft	TM-M
Short Shaft	TM-S
